* Should customer request update(s) necessitating a complete web site redesign; a contract extension will be required for our Advanced and Pro Package Plans. For the Standard Package Plan, updates following the initial website upload will be billed in half-hour increments at our current in-store rates.

¥ SSL is a protocol that uses encryption to safeguard the transmission of sensitive data. Compatible with all modern browsers, it is wise to use SSL when you process credit card transactions on your website, or when you have password-protected areas of your site. Your site visitors will be able to connect through SSL using a shared security certificate. If you wish to install a personal security certificate (dedicated to your domain only), you need to purchase one from a certificate authority. Our fee to install a personal security certificate is \$37.50 per year (roughly \$3 extra per month).

† If you wish to have any newsgroups, message boards, forums, shopping carts, featured listings etc. on your Web site you will need a database. A database is a structured collection of data. It may be anything from a simple shopping list to a picture gallery or vast amounts of information in a corporate network.
